

Hi I am **KOTA HARISH** I am a hard-working engineer specialized in mechanical engineering with overall percentage of 70% from Christu jyothi institute of technology and science affiliated to JNTUH HYDERABAD and I completed my schooling from ST Thomas high school which in Ghanpur station and i completed my diploma in Mechanical engineering with overall percentage of 80.65% from Government Polytechnic Warangal (Telangana state).

About family, we are two children i.e me and my sister, my father and mother being farmers they encourages us to study well. Then coming to my hobbies I love playing cricket, watching cricket, watching movies.

Coming to the answer why I joined EDYODA institute i have studied mechanical branch as main subject during in bachelor of technology and even in my diploma I took mechanical engineering as my choice so there we does not have any programming language or computer science subject as a part of our curriculum so having zero knowledge in field of information technology i am not able find job and i gone in to the depression then I started searching for coaching institutions, one day one of my friend told me about EDYODA and its teaching style and job opportunities and my friend knows one student who took coaching in your Edyoda and placed in MNC company with good package later i contacted him for detailed information. I am really impressed with the admission test process and Assignments.

Another reason why I joined Edyoda is that during this Corona pandemic , situations are changing quickly so earlier when took coaching for bank exams in offline mode during middle of course we have to left because of restriction imposed by government so then i decided join online program.

Thank you
